

## PIEMME BROKER - PL511 Glass Reinforced Plastic Enclosure: Sliced Design, Sliced Cost & Sliced Installation Time

The PL511 is the latest addition to the brand new PL5 range of GRP Increased Safety Enclosures, aimed at reducing purchase cost and installation time.

Installing and wiring a small enclosure can be a tedious task, with installation space often at a premium, the process can be slow and hard work. Problems with installation are often exacerbated in cold offshore environments where dexterity is inhibited.

Given that small enclosures are used for the most common electrical distribution applications, this is a problem that effects large volumes of installers throughout the Ex industry. The new PL511 enclosure has arrived to all but eradicate this problem.

The dropped lid body design, slices through the enclosure wall, exposing the terminals and providing easy access for wiring. This increased access also allows for terminations to be fully visually inspected.

Moulded from the latest in glass reinforced plastic material, the PL511 provides an economical alternative to traditional glass reinforced polyester enclosures, reducing weight and cost whilst maintaining the material strength characteristics required for harsh and hazardous locations.

Hawke develop also BoxHubb fast and simple solution

to designing and configuring enclosures online.

BoxHubb permits the error free creation of 2D drawings and 3D models of Hawke enclosures. Configurations can be exported in PDF and .dwg/.stp CAD formats, with a full bill of material and power ratings pre-calculated.

HAWKE INTERNATIONAL is distributed in Italy from PIEMME BROKER S.r.l. ; with a flexible and friendly team, consisting of highly experienced and dedicated professionals, with expertise covering many industry sectors, PIEMME BROKER is fully equipped to meet its clients' increasingly challenging and demanding requirements. Furthermore it is able to provide knowledge of domestic and international markets along with the supply of any industrial product, particularly when the case is related to critical conditions or to specific equipment and programs.

To further enhance these activities, PIEMME BROKER is also the Italian supply partner of internationally recognized and prestigious brands such as:

- MCT BRATTBERG – Multicable transit resistant to fire, water and smoke and ATEX certified
- HAWKE INTERNATIONAL – Cable glands, Ex Connectors, Accessories, Control Stations and Junction Boxes for world markets
- VICTOR LIGHTING – Globally approved lighting equipment for Harsh and Hazardous Areas
- OGLAEND SYSTEM – Cable trays, multidisciplinary supports
